

What is the concentration, in g/mL, of a solution made by dissolving 75.0 g of phosphoric acid in 50.0 mL of solution?

Concentration can be calculated as mass (g) divided by volume (mL):

$$C = m/V$$

$$C = 75/50 = 1.5 \text{ g/mL}$$

$$\underline{\underline{C = 1.5 \text{ g/mL}}}$$
