How do I prepare 0.5 M hcl in 1 I from conc hcl

## Solution

The 1 I conc $\mathrm{HCl}(36.5 \%$ of HCl$)$ is 11.8 M . ( $\left.\mathrm{d}=1.18 \mathrm{~g} / \mathrm{cm}^{3} ; \mathrm{M}_{\mathrm{r}}=36.5 \mathrm{~g} / \mathrm{mol}\right)$
$\mathrm{C}_{1} \mathrm{~V}_{1}=\mathrm{C}_{2} \mathrm{~V}_{2}$
We want to prepare $1 \mathrm{l} 0.5 \mathrm{M} \mathrm{HCl}=>0.5^{*} 1$; and we have to take $\mathbf{x}$ I of 11.8 M HCl .
$x=\frac{0.5 * 1}{11.8}=0.0424 \mathrm{I}$.
So you have to take 0.0424 I of conc HCl and 0.9576 I of water.
