

### **Question #39990, Biology, Biochemistry**

The ability of an element to participate in a chemical reaction is measured in form of its..

**Answer:** Term, which used to describe the ability of element to participate in chemical reactions, is valence. Valence – is a number of bonds which an atom can form with other atom or atoms. The valance of each chemical element depends on the number of valance electrons, which can for chemical bonds with other element.
