## Answer on Question \#41188-Chemistry-Inorganic Chemistry

## Question:

Calculate the volume , mass and number of molecules of hydrogen liberated when 299 g of sodium react with excess of water at STP.

## Solution:

Reaction equation

$$
2 \mathrm{Na}+2 \mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{NaOH}+\mathrm{H}_{2} \uparrow
$$

Amount of substance of sodium is:

$$
v(N a)=\frac{m(N a)}{A r(N a)}=\frac{299 \mathrm{~g}}{22.98 \mathrm{~mol} / \mathrm{g}}=13 \mathrm{~mol}
$$

From reaction equation:

$$
\frac{v(N a)}{v\left(H_{2}\right)}=\frac{2}{1}
$$

Thus,

$$
v\left(H_{2}\right)=13 * 2=26 \mathrm{~mol}
$$

For STP:

$$
V=V_{m} * v
$$

Calculation:

$$
V\left(\mathrm{H}_{2}\right)=22.4 \frac{\mathrm{~L}}{\mathrm{~mol}} * 26 \mathrm{~mol}=\mathbf{5 8 2 . 4} \mathbf{L}
$$

Calculation mass from amount of substance:

$$
m\left(H_{2}\right)=v\left(H_{2}\right) * M r\left(H_{2}\right)=26 \mathrm{~mol} * 2 \frac{\mathrm{~g}}{\mathrm{~mol}}=\mathbf{5 2} \boldsymbol{g}
$$

Calculating number of molecules using Avogadro's number:

$$
N=N_{A} * v\left(H_{2}\right)=6.02 * 10^{23} \mathrm{~mol}^{-1} * 26 \mathrm{~mol}=\mathbf{1 . 5 6} * \mathbf{1 0}^{\mathbf{2 5}}
$$
