

Answer on Question #41550 - Chemistry - Inorganic Chemistry

Question:

The distance between the oxygen molecule and each of the hydrogen atoms in a water (H_2O) molecule is 0.96 \AA and the angle between the two oxygen-hydrogen bonds is 105° . Treating the atoms as particles, find the centre of mass of the system.

Solution:

A water molecule may be represented as follows

Thus, we have an isosceles triangle ΔHOH , where

$$\text{HO} = 0.96 \text{ \AA}$$

$$\text{angle } \angle\text{HOH} = 105^\circ$$

Let us designate the centre of mass of the system in figure above as **C**.

Since water molecule is symmetric the center of mass lies on the axis of symmetry, i.e. it is equidistant from the hydrogen atoms (H). Let us designate the midpoint between H atoms as **D** ($\text{HD} = \text{HH}/2$).

Thus, in given case to find the centre of mass of the system means to find values of HD, DC and CO.

In rectangular triangle ΔDOH angle $\angle\text{DOH} = \angle\text{HOH}/2 = 105^\circ/2 = 52.5^\circ$

$$\text{OD} = \text{HO} \cdot \cos(\angle\text{DOH}) = 0.96 \cdot \cos(52.5^\circ) = 0.96 \cdot 0.609 = 0.58 \text{ \AA}$$

$$\text{HD} = \text{HO} \cdot \sin(\angle\text{DOH}) = 0.96 \cdot \sin(52.5^\circ) = 0.96 \cdot 0.793 = 0.76 \text{ \AA}$$

$$\text{DC} + \text{CO} = \text{OD} = 0.58 \text{ \AA}$$

Molar mass of O atom $M_{\text{O}} = 16.00 \text{ g/mol}$, molar mass of H atom $M_{\text{H}} = 1.01 \text{ g/mol}$.

In consideration of law of the lever:

$$\text{CO} \cdot M_{\text{O}} = \text{DC} \cdot 2M_{\text{H}}$$

Assigning $\text{DC} = x$, $\text{CO} = y$ and substituting the known values we get the system of two equations:

$$\begin{cases} x + y = 0.58 \\ 16.00 \cdot y = 2 \cdot 1.01 \cdot x \end{cases}$$

$$y = 2.02 \cdot x / 16.00 = 0.126 \cdot x$$

$$x + 0.126 \cdot x = 0.58$$

$$1.126 \cdot x = 0.58$$

$$x = 0.58 / 1.126 = 0.51$$

$$y = 0.58 - x = 0.58 - 0.51 = 0.07$$

$$y = 0.58 - x = 0.58 - 0.51 = 0.07$$

So, $\text{DC} = 0.07 \text{ \AA}$ and $\text{CO} = 0.51 \text{ \AA}$.
