

Question#46801 – Chemistry – Organic Chemistry

Question:

Give three sentences on the importance of chemistry?

Answer:

Chemistry is the fundamental science studying the nature of materials, their properties and transformations they undergo. Chemistry is focused on the properties of atoms and their interactions in compounds. Most of artificial and nature compounds are investigated and synthesized using chemical phenomena. Such wide industrial processes as pharmacy, mining industry are based on chemical processes. Chemistry also deals with new materials, plastics.
