

## Question #47955, Chemistry, Other

If you mix Triazine and water will you create formaldehyde gas?

Answer:

Triazines - a group of compounds.

1,2,3-Triazine (1), 1,2,4-Triazine (2) и 1,3,5-Triazine (3).

Often the nucleophilic attack on the triazine ring are ring-opening. 1,2,3-triazine at room temperature is stable to hydrolysis. 1,3,5-triazine almost completely hydrolyzed to ammonium formate, but not to formaldehyde in the gas phase.
