## Answer on Question \#48803, Chemistry, Other

## Task:

Calculate the $\mathrm{H}_{2} \mathrm{C}_{2} \mathrm{O}_{4}(\mathrm{aq})$ molarity if 10.00 ml of its solution reacts completely with 31.5 ml of a $0.0158 \mathrm{M} \mathrm{KMnO}_{4}$ ?

Answer:

$$
\begin{aligned}
& \overline{C_{M}\left(\mathrm{H}_{2} \mathrm{C}_{2} \mathrm{O}_{4}\right) \cdot V\left(\mathrm{H}_{2} \mathrm{C}_{2} \mathrm{O}_{4}\right)=\mathrm{C}_{\mathrm{M}}\left(\mathrm{KMnO}_{4}\right) \cdot V\left(\mathrm{KMnO}_{4}\right)} \\
& C_{M}\left(\mathrm{H}_{2} \mathrm{C}_{2} \mathrm{O}_{4}\right)=\frac{0,0158 \cdot 31,5}{10,00}=0,05 \mathrm{M}
\end{aligned}
$$
