## Answer on Question\#55457 - Chemistry - Other

## Question:

A sample of gas occupies 135 ml at 22.5 degrees Celsius the pressure is 165 mm Hg . whats the pressure of the gas sample when its placed in a 252 ml flask at a temperature of 0 degrees
Celsius?

## Solution:

P - pressure (mm Hg or Pa );
T-temperature (K)
V - volume (L);
$\mathrm{V} 1=135 \mathrm{ml}=0.135 \mathrm{~L} ;$
$\mathrm{V} 2=252 \mathrm{ml}=0.252 \mathrm{~L} ;$
$\mathrm{T} 1=22.5^{\circ} \mathrm{C}=295.65 \mathrm{~K}$;
$\mathrm{T} 2=0^{\circ} \mathrm{C}=273.15 \mathrm{~K} ;$
P1 = $165 \mathrm{~mm} \mathrm{Hg}=21998,2 \mathrm{~Pa} ;$
P2-?
According to the Boyle's law:

$$
\begin{aligned}
& \frac{P 1 V 1}{T 1}=\frac{P 2 V 2}{T 2} ; \\
& P 2=\frac{P 1 V 1 T 2}{T 1 V 2} ; \\
& P 2=81.67 \mathrm{~mm} \mathrm{Hg}
\end{aligned}
$$

Answer: 81.67 mm Hg ( 108 kPa ).
