## Answer on Question \#59704, Chemistry / General Chemistry

$9.00 \times 10^{-3} \mathrm{~mol}$ of HBr are dissolved in water to make 15.0 L of solution. What is the concentration of hydroxide ions, $\left[\mathrm{OH}^{-}\right]$, in this solution?

$$
\begin{gathered}
\mathrm{HBr} \rightarrow \mathrm{H}^{+}+\mathrm{Br}^{-} \\
{[\mathrm{HBr}]=\frac{9.00 \cdot 10^{-3} \mathrm{~mol}}{15.0 \mathrm{~L}}=6 \cdot 10^{-4} \mathrm{M}} \\
{\left[\mathrm{H}^{+}\right]=[\mathrm{HBr}]=6 \cdot 10^{-4} \mathrm{M}} \\
{\left[\mathrm{H}^{+}\right] \cdot\left[O \mathrm{H}^{-}\right]=10^{-14}} \\
{\left[O \mathrm{H}^{-}\right]=\frac{10^{-14}}{\left[\mathrm{H}^{+}\right]}} \\
{\left[O H^{-}\right]=\frac{10^{-14}}{6 \cdot 10^{-4}}=1.67 \cdot 10^{-11}}
\end{gathered}
$$
