Question \#62419, Chemistry / General chemistry
At STP, a sample of fluorine gas has a mass of 135.6 g . Calculate the volume of this gas.

## Solution

$\mathrm{M}\left(\mathrm{F}_{2}\right)=38 \mathrm{~g} / \mathrm{mol}$
$\mathrm{n}\left(\mathrm{F}_{2}\right)=\mathrm{m} / \mathrm{M}=3.57(\mathrm{~mol})$
$\mathrm{n}=\mathrm{V} / \mathrm{Vm}$
$\mathrm{V}=\mathrm{n} * \mathrm{Vm}=3.57 * 22.4=79.97(\mathrm{I})$
Or
$P V=n R T$
$\mathrm{V}=\mathrm{n} * \mathrm{R} * \mathrm{~T} / \mathrm{P}=3.57 * 8.314 * 273 / 101.325=79.97$ (I)

## Answer

$V\left(F_{2}\right)=79.97 L$
