

Answer on Question#65648 – Chemistry – Organic chemistry

Question:

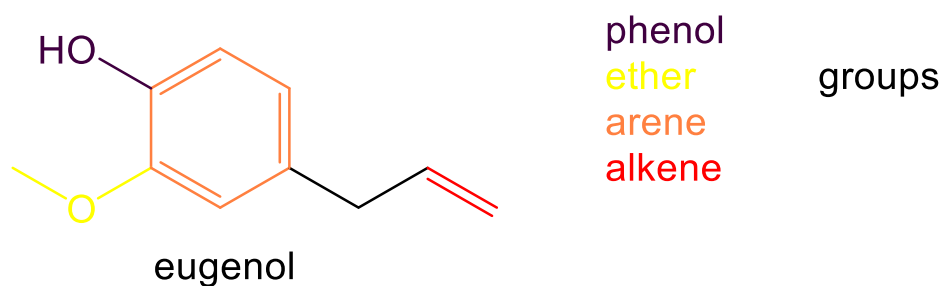

Are the functional groups in eugenol alcohol, ether, phenol and alkene or ether, alcohol, arene and alkene

Answer: there is a structural formula of eugenol below.

Eugenol does not contain any alcohol groups. OH- group bonded directly to a benzene ring (arene group) is named phenol group.

Also eugenol contain ether and alkene groups.

So, ether, phenol, alkene and arene groups are in eugenol.
