

Answer on Question#65882 – Chemistry – Organic chemistry

Question 1 : _____ is an example of Isolated Benzenoid Hydrocarbon.

Phenanthrene

Anthracene

Biphenyl

Naphthalene

Answer: Biphenyl

Question 2 : Down the group, electronegativity -----.

None of the above

Increases

Decreases

Neutral

Answer: Decreases

Question 3 : A compound in which a halogen atom is attached to another carbon atom by a double bond is called -----.

Vinyl halide

Alkyl halide

Vicinal dihalides

Geminal dihalides

Answer: Vinyl halide

Question 4 : All these affect boiling points except _____.

Polarity

Shape of molecule

Molecular structure

London forces

Answer: London forces
