## Answer on Question \#66024-Chemistry - Organic Chemistry

## Task:

How many grams of H 2 O are produced from 9.40 g of ethanol?

## Solution:

Water $=\mathrm{H}_{2} \mathrm{O}$;
Ethanol $=\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}$;
Ethylene $=\mathrm{C}_{2} \mathrm{H}_{4}$.
Reaction Scheme:
$\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH} \xrightarrow{\mathrm{H}^{+}} \mathrm{C}_{2} \mathrm{H}_{4}+\mathrm{H}_{2} \mathrm{O}$

By the equation:

$$
\begin{aligned}
& n\left({ }_{2} H \rho H\right)=n(H Q) \\
& \frac{m\left(~_{2} Y H\right)}{M \mathbb{C} H Q H)}=\frac{m\left(H_{2} O\right)}{M H Q)} \\
& m\left(H_{2} O\right)=\frac{\left.M\left(H_{2} O\right) \times m C H \rho H\right)}{M \mathbb{C} H Q H)} \\
& m\left(H_{2} O\right)=\frac{18 \times 9.40}{46} \approx 3.68(g)
\end{aligned}
$$

Answer: $3.68 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$.
