## Answer on Question \#68470 - Chemistry - General Chemistry

## Task:

What is the total in atm in a sealed flask that contains hydrogen at a partial pressure of 32 atm and oxygen at a partial pressure of 720 mm Hg .

## Solution:

Mathematically, the pressure of a mixture of non-reactive gases can be defined as the summation:

$$
P_{\text {total }}=\sum_{i=1}^{n} P_{i} ; \quad \text { or } \quad P_{\text {total }}=P_{1}+P_{2}+P_{3}+\ldots+P_{n} .
$$

where $\mathrm{P}_{1}, \mathrm{P}_{2}, \ldots, \mathrm{P}_{\mathrm{n}}$ represent the partial pressures of each component.
$1 \mathrm{~atm}=760 \mathrm{~mm} \mathrm{Hg}$;

$$
\begin{aligned}
& P(\text { oxygen })=P\left(\mathrm{O}_{2}\right)=720 \mathrm{~mm} \mathrm{Hg} \cdot \frac{1 \mathrm{~atm}}{760 \mathrm{~mm} \mathrm{Hg}}=0.947 \mathrm{~atm} ; \\
& P(\text { hydrogen })=P\left(\mathrm{H}_{2}\right)=32 \mathrm{~atm} .
\end{aligned}
$$

Then,

$$
P_{\text {total }}=P\left(\mathrm{O}_{2}\right)+P\left(\mathrm{H}_{2}\right)=0.947 \mathrm{~atm}+32 \mathrm{~atm}=32.947 \mathrm{~atm}
$$

Answer: P (total) $=32.947$ atm.
