If marginal propensity to consume halves and investment and all other things remain unchanged then consumption halves and this lead to saving doubles.

$$
\begin{gathered}
c^{\prime}=\frac{C}{Y} \\
Y=\text { const } \\
c^{\prime} \downarrow \times 2 \rightarrow C \downarrow \times 2 \\
Y=C+S \\
C \downarrow \times 2 \rightarrow S \uparrow \times 2 \\
\boldsymbol{c}^{\prime} \downarrow \times \mathbf{2} \rightarrow \boldsymbol{C} \downarrow \times \mathbf{2} \rightarrow \boldsymbol{S} \uparrow \times \mathbf{2}
\end{gathered}
$$
