

Answer on Question #46044, Economics, Economics of Enterprise

A production–possibility frontier PPF, sometimes called a production–possibility curve, production-possibility boundary or product transformation curve, is a graph representing production tradeoffs of an economy given fixed resources. The graph shows the various combinations of amounts of two commodities that an economy can produce (e.g., number of guns vs kilos of butter) using a fixed amount of each of the factors of production.

But we can't answer the questions provided, because there is not enough information provided for calculation.
