Judith works after school at her family's tent company. One of their best selling tents is an A-frame tent that is 4 ft . high and has a rectangular bottom 4 ft . wide by 6 ft . long. The sides of the tent are 4.5 ft . long. How much canvas is needed to make the tent?
$\mathrm{H}=4 \mathrm{ft}$
$\mathrm{W}=4 \mathrm{ft}$
$\mathrm{L}=6 \mathrm{ft}$
$\mathrm{A}=4.5 \mathrm{ft}$
$\mathrm{S}=$ ?

## Solution

$S=2^{*} S 1+2 * S 2+$ Sbase
Where:
S1 - area of the triangle
S2 - area of the rectangle
Sbase - area of the bottom
Find area of the bottom by the formula:
Sbase $=\mathrm{w}^{*} \mathrm{l}=4 * 6=24 \mathrm{ft}^{2}$
Find area of the triangle by the formula:
$\mathrm{S} 1=1 / 2^{*} \mathrm{w} * \mathrm{~h}=0.5 * 4 * 4=8 \mathrm{ft}^{2}$
Find area of the rectangle by the formula:
$\mathrm{S} 2=\mathrm{a}^{*} \mathrm{l}=4.5 * 6=27 \mathrm{ft}^{2}$
Then substitute the resulting values in the general formula:
$S=2 * 8+2 * 27+24=94 \mathrm{ft}^{2}$.

## Answer

Need $94 \mathrm{ft}^{2}$ of the canvas.
