

1c. $(3x+2)/5 \leq x - 1$
 we have $3x+2 \leq 5(x-1)$
 $3x+2 \leq 5x-5$
 $2+5 \leq 5x-3x$
 $7 \leq 2x$
 $3.5 \leq x$

2a. $|2y+5| > 1$
 so $2y+5 > 1$ or $2y+5 < -1$
 so $2y > -4$ or $2y < -6$
 we get $y > -2$ or $y < -3$
