A boat leaves a harbour $A$ on a course of 120 degrees and it sails 50 km in this direction until it reaches point $B$. How far is $B$ east of $A$ and what distance south of $A$ is $B$ ?
$x$ - how far is B east of $A$
$y$ - how far is $B$ south of $A$

$$
\begin{gathered}
x=50 \cdot \sin 30^{\circ}=25 \mathrm{~km} \\
y=50 \cdot \cos 30^{\circ}=43,3 \mathrm{~km}
\end{gathered}
$$

$B$ is 25 km east of $A$
$B$ is $43,3 \mathrm{~km}$ south of $A$
