Let $\mathrm{U}=\{1,2,3,4,5,6,7\} \mathrm{A}=\{1,3,5,7\} \mathrm{B}=\{1,2,3\} \mathrm{C}=\{2,3,4,5,6\}$
What are these sets?
2. $\mathrm{A} \cap(\mathrm{BUC})$
we use definition of union, interception
$\{1,3,5,7\} \cap(\{1,2,3\} \cup\{2,3,4,5,6\})=\mid$ union have elements that arise at least
at one of sets $|=\{1,3,5,7\} \cap(\{1,2,3,4,5,6\})=|$ interception - elements that belongs to both set|
$=\{1,3,5\}$
4. $(\mathrm{A} \cap \mathrm{B}) \mathrm{U}(\mathrm{A} \cap \mathrm{C})$

By the formula $(A \cap B) U(A \cap C)=A \cap(B U C)$ but from the previous it is equal to $\{1,3,5\}$.
6. C' $\cap(A U B ')$
$\mathrm{X}^{\prime}=\mathrm{U} / \mathrm{X}$ - elements that doesnt belongs to X
so $\mathrm{C}^{\prime} \cap\left(\mathrm{AUB}^{\prime}\right)=\left(\{2,3,4,5,6\}^{\prime}\right) \cap\left(\{1,3,5,7\} \mathrm{U}\{1,2,3\}^{\prime}\right)=\{1,7\} \cap\left(\{1,3,5,7\} \mathrm{U}\{1,2,3\}^{\prime}\right)=\{1,7\} \cap(\{1,3,5,7\} \mathrm{U}\{$
$=\{1,7\} \cap\{1,3,4,5,6,7\}=\{1,7\}$
8. (C' $\cap \mathrm{A}) \mathrm{U}\left(\mathrm{C}^{\prime} \cap \mathrm{B}^{\prime}\right)$

From the formula $\left(\mathrm{C}^{\prime} \cap \mathrm{A}\right) \mathrm{U}\left(\mathrm{C}^{\prime} \cap \mathrm{B}^{\prime}\right)=\mathrm{C}^{\prime} \cap\left(\mathrm{AUB}^{\prime}\right)=\{1,7\}$
10. $(\mathrm{A} \cap \mathrm{B} \cap \mathrm{C})$ '
$(\{1,3,5,7\} \cap\{1,2,3\} \cap\{2,3,4,5,6\})^{\prime}=(\{1,3\})^{\prime}=\{2,4,5,6,7\}$
12. (B U C)' $\cap \mathrm{A}=(\{1,2,3\} \mathrm{U}\{2,3,4,5,6\})^{\prime} \cap\{1,3,5,7\}=(\{1,2,3,4,5,6\})^{\prime} \cap$
$\{1,3,5,7\}=\{7\} \cap\{1,3,5,7\}=\{7\}$
