

Answer on Question #37433 – Math - Other

Let's find these numbers:

$$(8 - 1)^2 - 9 - \sqrt{4} = 49 - 9 - 2 = 38$$

$$8^2 - 9 + 4 - 1 = 64 - 9 + 3 = 58$$

$$9^2 + 8 - 4 + 1 = 81 + 5 = 86$$

$$9^2 + 8 + 4 + 1 = 81 + 13 = 94$$

$$(9 + 1)^2 - \frac{8}{4} = 100 - 2 = 98$$
