## Answer on Question\#37921-<Math> - <Combinatorics | Number Theory>

Determine the number of ways to pick $n$ fruits from $k$ varieties of fruits where one picks at least $\mathrm{l}<\mathrm{k}$ different fruits.

## Solution:

the equation for the total number of fruits ( $\mathrm{x}_{1}, \mathrm{x}_{2} \ldots-$ amount of fruits from each variety):

$$
\mathrm{x}_{1}+\mathrm{x}_{2}+\cdots+\mathrm{x}_{\mathrm{k}}=\mathrm{n}
$$

Number of solutions of the equation (the number of ways to pick $n$ fruits from $k$ varieties of fruits):

$$
\begin{gathered}
\mathrm{k}-1 \\
\mathrm{n}+\mathrm{k}-1
\end{gathered}
$$

From this amount we must subtract the amount of the same fruits $\leq 1-1$ :

$$
\mathrm{C}_{\mathrm{n}}^{\mathrm{k}+\mathrm{k}-1} \begin{gathered}
\mathrm{k}-\mathrm{C}_{\mathrm{l}}^{\mathrm{l}}+\mathrm{l}-1
\end{gathered}
$$

Answer: the number of ways to pick $n$ fruits is equal to $C_{n+1} \begin{gathered}k-1\end{gathered}-C_{l} \begin{gathered}l-1 \\ \mathrm{k} \\ \mathrm{k}-\mathrm{k}-2\end{gathered}$.
