

Answer on Question #41151 – Math – Integral Calculus

Evaluate the limit :

lim x tends to infinite $\{(\sin(1/x))/(e(1/x)-1)\}$.

Solution:

$$\lim_{x \rightarrow \infty} \frac{\sin \frac{1}{x}}{e^{\frac{1}{x}} - 1} = \left[\text{Let } t = \frac{1}{x} \right] = \lim_{t \rightarrow 0} \frac{\sin t}{e^t - 1} = [\sin t \sim t, t \rightarrow 0; e^t - 1 \sim t, t \rightarrow 0] = \lim_{t \rightarrow 0} \frac{t}{t} = 1.$$

Answer: 1.
