

Answer on Question #52828 – Math – Analytic Geometry

Find the equation of cone with vertex (α, β, γ) and base $y^2 - 4ax = 0, z = 0$.

Solution

Any line through vertex (α, β, γ) is $\frac{x - \alpha}{l} = \frac{y - \beta}{m} = \frac{z - \gamma}{n}$.

Any point on this line is $(x, y, z) = (lr + \alpha, mr + \beta, nr + \gamma)$.

It will lie on the given parabola $y^2 - 4ax = 0, z = 0$ if, for the same value of r , we have

$$\begin{cases} nr + \gamma = 0 \\ (mr + \beta)^2 - 4 \cdot a(lr + \alpha) = 0 \end{cases}$$

Then

$$\begin{cases} r = -\gamma / n \\ (mr + \beta)^2 - 4 \cdot a(lr + \alpha) = 0 \end{cases} \Rightarrow \begin{cases} r = -\gamma / n \\ \left(\beta - \gamma \frac{m}{n}\right)^2 - 4 \cdot a\left(\alpha - \gamma \frac{l}{n}\right) = 0 \end{cases}$$

So, eliminating l, m, n

$$\begin{aligned} \left(\beta - \gamma \frac{m}{n}\right)^2 - 4 \cdot a\left(\alpha - \gamma \frac{l}{n}\right) = 0 &\Rightarrow (\beta n - \gamma m)^2 - 4 \cdot an(\alpha n - \gamma l) = 0 \\ (\beta(z - \gamma) - \gamma(y - \beta))^2 - 4 \cdot a\alpha(z - \gamma)^2 + 4a\gamma(z - \gamma)(x - \alpha) &= 0 \end{aligned}$$

The equation of cone is $z^2(\beta^2 - 4a\alpha) + 4a\gamma xz + 4a\alpha\gamma z - 2\beta\gamma yz - 4a\gamma^2 x + \gamma^2 y^2 = 0$.
