

Answer on Question #56040 –Math –Vector Calculus

One of the following laws for dot and cross multiplication of three vectors A , B and C is invalid:

$$(A \cdot B)C = A(B \cdot C)$$

$$A \times (B \times C) = (A \cdot C)B - (A \cdot B)C$$

$$(A \times B) \times C = (A \cdot C)B - (B \cdot C)A$$

$$A \times (B \times C) \neq (A \times B) \times C$$

Solution

$$(A \cdot B)C = A(B \cdot C)$$

$$(\bar{A} \cdot \bar{B})\bar{C} = \bar{A}(\bar{B} \cdot \bar{C}),$$

The dot products are scalars, so it means

$$\bar{C} = k\bar{A}, \text{ where } k = \frac{(\bar{B} \cdot \bar{C})}{(\bar{A} \cdot \bar{B})}.$$

So \bar{C} is some scalar multiple of \bar{A} . Thus, this rule is not true for any three vectors **A** , **B** and **C**.
