## Answer on Question \#75836 - Math - Calculus

## Question

Find the domain of the function $f$, defined by $f(x)=\sqrt{\left(\left(x^{3}\right)(9-x)\right)}$

## Solution

$$
x^{3}(9-x) \geq 0
$$

Dividing by $x^{2} \geq 0$

$$
x(9-x) \geq 0
$$

Multiplying by (-1)

$$
x(x-9) \leq 0
$$

The table of signs

|  | $\mathrm{x}<0$ | $\mathrm{x}=0$ | $0<\mathrm{x}<9$ | $\mathrm{x}=9$ | $\mathrm{x}>9$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{x}-9$ | - | - | - | 0 | + |
| x | - | 0 | + | + | + |
| $\mathrm{x}(\mathrm{x}-9)$ | + | 0 | - | 0 | + |

It follows from the table of signs that the solution of the inequality $x(x-9) \leq 0$ is $0 \leq x \leq 9$.
The domain of the function $f$ is given by

$$
D(f)=[0,9] .
$$

Answer: $D(f)=[0,9]$.
