

Answer on Question #76364 – Math – Discrete Mathematics

Question

Define the relation R as

$R = \{(a, b) \mid a, b \in \mathbb{Z}, 4 \text{ divides } a - b\}$. Show that R is reflexive, transitive and symmetric.

Solution

1. Reflexive property: $a - a = 0 : 4$ for every $a \in \mathbb{Z}$.
2. Transitive property: another definition for this relation is $R = \{(a, b) \mid a, b \in \mathbb{Z}, a \equiv b \pmod{4}\}$. As congruence relation is transitive R is transitive.
3. Symmetric property: if 4 divides $a - b$, then 4 divides $b - a$, so R is symmetric.
