

Answer on Question #82606 – Math – Abstract Algebra

Question

if $a \equiv b \pmod{r}$ and $a \equiv b \pmod{s}$ then $a \equiv b \pmod{[r,s]}$

Solution

We need to prove that if $a \equiv b \pmod{r}$ and $a \equiv b \pmod{s}$ then $a \equiv b \pmod{[r,s]}$.

Proof

$$a \equiv b \pmod{r} \Leftrightarrow a = b + r \cdot k_1, \quad \forall k_1 \in \mathbb{Z}$$

and $\exists l \in \mathbb{Z}: [r,s] = r \cdot l$.

We need to prove that

$$a \equiv b \pmod{[r,s]} \Leftrightarrow a = b + [r,s] \cdot k_2, \quad \forall k_2 \in \mathbb{Z}$$

Just let $k_1 = l \cdot k_2$. The first formula is correct for all k_1 , and then for $k_1 = l \cdot k_2$. Thus, the second formula is correct for all k_2 .
