

## Answer on Question #83570 – Math – Trigonometry

### Question

Jana is proving that the following trigonometric identity is true:

$$\cos(-\theta) \tan \theta = \sin \theta$$

Which would be a correct first line of her proof?

$$\cos(\theta) \tan \theta = \sin \theta$$

$$\cos(-\theta) \tan \theta = \sin(-\theta)$$

$$\cos(-\theta) \tan(-\theta) = \sin(-\theta)$$

$$\cos(\theta) \tan(-\theta) = \sin(\theta)$$

### Solution

Due to the symmetry of  $\cos(\theta)$  (the cosine function is even, which means  $\cos(-\theta) = \cos(\theta)$ ), the equality

$$\cos(-\theta) \tan(\theta) = \sin(\theta)$$

is transformed to

$$\cos(\theta) \tan(\theta) = \sin(\theta),$$

which is also valid due to the definition of the tangent function

$$\tan(\theta) = \frac{\sin(\theta)}{\cos(\theta)}.$$

**Answer:** the correct first line would be  $\cos(\theta) \tan(\theta) = \sin(\theta)$ .
