

Answer on Question #85026 – Math – Calculus

Question

The range of the function f , defined by $f(x) = e^{-x}/(1+x)$ on $[0, \infty[$, is $]-\infty, 0[$.

Is the statement true or false?

Give a short proof or a counter example in support of your answer.

Solution

Function e^{-x} on $[0, \infty[$ is always positive, has an upper bound 1 at $x=0$ and continually descending to 0. Function $1/(1+x)$ on $[0, \infty[$ has the same behavior.

Thus, multiplication of both functions yields the $e^{-x}/(1+x)$ is always positive, it has an upper bound 1 at $x=0$ and continually descending to 0. So, the range of the function f is $]0, 1]$.

Answer: False. The range is $]0, 1]$.
