

Answer to Question #90371 – Math – Linear Algebra

Question

Let A be a matrix of 3×2 order with real entities. $H = A(A^T A)^{-1} A^T$, where A^T is the transpose of the matrix. Let I be the identity matrix of the order 3×3 . $H^2 = ?$

Solution

A be a 3×2 matrix. Let $A = \begin{bmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \\ a_{31} & a_{32} \end{bmatrix}$

$$\begin{aligned} \text{Given that } H &= A_{3 \times 2} (A_{2 \times 3}^T A_{3 \times 2})^{-1} A_{2 \times 3}^T \\ &= A_{3 \times 2} (B)_{2 \times 2}^{-1} A_{2 \times 3}^T \text{ (Since the order of } B = A_{2 \times 3}^T A_{3 \times 2} \text{ is } 2 \times 2) \\ \text{Consider, } H^2 &= (A_{3 \times 2} (B)_{2 \times 2}^{-1} A_{2 \times 3}^T)^2 \\ &= (A_{3 \times 2} (B)_{2 \times 2}^{-1} A_{2 \times 3}^T) (A_{3 \times 2} (B)_{2 \times 2}^{-1} A_{2 \times 3}^T) \\ &= A_{3 \times 2} (B)_{2 \times 2}^{-1} (A_{2 \times 3}^T A_{3 \times 2}) (B)_{2 \times 2}^{-1} A_{2 \times 3}^T \\ &\text{(Since Matrix multiplication is associative)} \\ &= A_{3 \times 2} (B)_{2 \times 2}^{-1} (B_{2 \times 2}) (B)_{2 \times 2}^{-1} A_{2 \times 3}^T \text{ (Since, } B_{2 \times 2} = A_{2 \times 3}^T A_{3 \times 2}) \\ &= A_{3 \times 2} (B)_{2 \times 2}^{-1} (I_{2 \times 2}) A_{2 \times 3}^T \text{ (Since, } (B_{2 \times 2}) (B)_{2 \times 2}^{-1} = I_{2 \times 2}) \\ &= A_{3 \times 2} (B)_{2 \times 2}^{-1} A_{2 \times 3}^T \text{ (Since, } I_{2 \times 2} A_{2 \times 3}^T = A_{2 \times 3}^T) \\ &= A_{3 \times 2} C_{2 \times 3} \text{ (Since, } (B)_{2 \times 2}^{-1} A_{2 \times 3}^T = C_{2 \times 3}) \\ &= D_{3 \times 3} \end{aligned}$$

Therefore, $H^2 = (A_{3 \times 2} (B)_{2 \times 2}^{-1} A_{2 \times 3}^T)^2 = D_{3 \times 3}$.

In this problem we cannot apply $(AB)^{-1} = (B)^{-1} (A)^{-1}$ (Since, A and Transpose A are not invertible in the given problem as they are rectangular matrices)
