Due to known formula $m=\rho * V$, were $m$ - mass, $\rho$ - density, $V$ - volume.
Therefore
$\boldsymbol{V}=\frac{\boldsymbol{m}}{\boldsymbol{\rho}}$
Vgold $=\frac{200}{19,3}=10.36 \mathrm{ml}$
$V l e a d=\frac{200}{11.4}=17.54 \mathrm{ml}$
Viron $=\frac{200}{7,8}=25.64 \mathrm{ml}$
Valuminium $=\frac{200}{2,7}=\mathbf{7 4 . 0 7} \mathbf{m l}$
Answer: " $A$ " is iron, " $B$ " is gold, " $C$ " is lead.
