## Question\#14824

Chelsea went for a walk. At the beginning of her walk, she was traveling $2.3 \mathrm{~m} / \mathrm{s}$. Then she began to jog to reach a maximum speed of $4.2 \mathrm{~m} / \mathrm{s}$ over a 15 second period. Assume that Chelsea's acceleration was constant.

Solution:
Let:
$v 1=2.3 \mathrm{~m} / \mathrm{s}$
$v 2=4.2 \mathrm{~m} / \mathrm{s}$
$t=15 \mathrm{~s}$
$a-$ ?
$a=\frac{v 2-v 1}{t}$;
$a=\frac{4.2-2.3}{15}=0.13 \mathrm{~m} / \mathrm{s}^{2}$
