

My mother birthday party start in 45 minutes she a lives a one and half kilo meter away. How kilometer i walk per hour?

$$45 \text{ minutes} = \frac{3}{4} \text{ of hour}$$

$$\text{Velocity} = \frac{\text{way}}{\text{time}} = \frac{1.5 \text{ km}}{0.75 \text{ hour}} = 2 \frac{\text{km}}{\text{hour}}$$
