## Question 31217

The body moves two seconds without initial velocity. The speed at moment $t$ is in general $v(t)=v_{0}+g t$, where $v_{0}$ is the initial velocity (If body moves vertically, according to gravity it gets acceleration $g=9.81 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}$ ). Since the initial velocity of body is zero, using last formula, for moment of time $\quad t=2$, obtain $\quad v(2)=g \frac{\mathrm{~m}}{\mathrm{~s}^{2}} \cdot 2 \mathrm{~s}=9.81 \frac{\mathrm{~m}}{\mathrm{~s}^{2}} \cdot 2 \mathrm{~s}=19.62 \mathrm{~m}$. Hence, the height is 19.62 m .
