## Answer on Question\#37574, Physics, Other

## Question:

The engine of a vehicle moves it forward with a force of 9600N against a relative force of 2200 N . If the mass of the vehicle is 3400 kg , find the acceleration produced.

## Answer:

Newton's second law of motion can be expressed in equation form as follows:

$$
\sum \vec{F}=m \vec{a}
$$

Net force equals:

$$
F_{N}=9600 \mathrm{~N}-2200 \mathrm{~N}=7400 \mathrm{~N}
$$

Therefore acceleration equals:

$$
a=\frac{7400 \mathrm{~N}}{3400 \mathrm{~kg}}=2.2 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}
$$

Answer: $2.2 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}$
