## Answer on Question\#38486 - Physics - Mechanics | Kinematics | Dynamics

A plane with a speed of $75 \mathrm{~m} / \mathrm{s}$ is going to travel along a runway of 25 km , If it makes an acceleration of $1.3(\mathrm{~m} / \mathrm{s}) / \mathrm{s}$, will it use the runway safely? Justify your answer.

## Solution:

$\mathrm{a}=1.3 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}-$ decceleration of the plane;
$V_{0}=75 \frac{\mathrm{~m}}{\mathrm{~s}}$ - initial velocity of the plane;
Equation of motion for the plane for first distance d :
$d=V_{0} t-\frac{\mathrm{at}^{2}}{2}$
Rate equation for the plane for this distance ( $V_{1}=0-$ velocity after time $\left.t\right)$ :
$V_{1}=V_{0}$ - at
$V_{0}$ - at $=0$
$t=\frac{V_{0}}{a}$
(2)in(1):
$\mathrm{d}=\mathrm{V}_{0} \cdot \frac{\mathrm{~V}_{0}}{\mathrm{a}}-\frac{\mathrm{a}\left(\frac{\mathrm{V}_{0}}{\mathrm{a}}\right)^{2}}{2}=\frac{\mathrm{V}_{0}^{2}}{2 \mathrm{a}}=\frac{\left(75 \frac{\mathrm{~m}}{\mathrm{~s}}\right)^{2}}{2 \cdot 1.3 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}}=2160 \mathrm{~m}$
Answer: plane will use the runway safely (travelled distance $2.16 \mathrm{~km}<25 \mathrm{~km}$ ).
