## Answer on Question\#38500 - Physics - Mechanics | Kinematics | Dynamics

Calculate tension(centripetal force) of the rope with a stone at its end. Mass of the stone is 2 kg , length of the rope is 5 m , the stone velocity is $10 \mathrm{~m} / 2$

## Solution:

$\mathrm{m}=2 \mathrm{~kg}-$ mass of the stone;
$\mathrm{l}=5 \mathrm{~m}$ - length of the rope;
$\mathrm{V}=10 \frac{\mathrm{~m}}{\mathrm{~s}}$
Formula for the centripetal force:

$$
\mathrm{F}=\mathrm{ma}_{\mathrm{c}}=\mathrm{m} \frac{\mathrm{~V}^{2}}{\mathrm{l}}=2 \mathrm{~kg} \cdot \frac{\left(10 \frac{\mathrm{~m}}{\mathrm{~s}}\right)^{2}}{5 \mathrm{~m}}=40 \mathrm{~N}
$$

Answer: centripetal force of the rope Is equal to 40 N .
