## Answer on Question \#38727

## Physics - Molecular Physics | Thermodynamics

## Question:

A gas occupies a certain volume at 27 degree centigrate.at wat temperature will it's volume be 3 times the original volume assuring it's pressure remains constant

Solution:
We have

$$
\begin{gathered}
V_{1}=\frac{V_{2}}{3}, \\
T_{1}=27^{\circ} \mathrm{C} \equiv 300 \mathrm{~K}
\end{gathered}
$$

Gay-Lussac's law:

$$
\frac{V_{1}}{T_{1}}=\frac{V_{2}}{T_{2}} \Rightarrow T_{2}=T_{1} \frac{V_{2}}{V_{1}}=900 \mathrm{~K} \equiv 627^{\circ} \mathrm{C}
$$

Answer:
$900 \mathrm{~K} \equiv 627^{\circ} \mathrm{C}$.
