## Answer on Question \#43276 - Physics - Other

## Question.

A 30 kg girl and a 25 kg boy are standing on frictionless roller skates. The girl pushes the boy away who moves at $1.0 \mathrm{~m} / \mathrm{s}$, the girl's speed is
A. $1.8 \mathrm{~m} / \mathrm{s}$
B. $1.2 \mathrm{~m} / \mathrm{s}$
C. $0.83 \mathrm{~m} / \mathrm{s}$
D. $0.55 \mathrm{~m} / \mathrm{s}$
E. $0.45 \mathrm{~m} / \mathrm{s}$

Given:
$m_{1}=30 \mathrm{~kg}$ is the mass of the girl
$m_{2}=25 \mathrm{~kg}$ is the mass of the boy
$v_{2}=1 \frac{\mathrm{~m}}{\mathrm{~s}}$ is the speed of the boy
Find:
$v_{1}=?$ is the speed of the girl

## Solution.

Use the law of conservation of momentum:
In a closed system (one that does not exchange any matter with the outside and is not acted on by outside forces) the total momentum is constant.

$$
p_{1}=p_{2}
$$

By definition: $p=m v \rightarrow p_{1}=m_{1} v_{1} ; p_{2}=m_{2} v_{2}$
So, in our case,

$$
m_{1} v_{1}=m_{2} v_{2}
$$

Therefore,

$$
v_{1}=\frac{m_{2}}{m_{1}} v_{2}
$$

Calculate:

$$
v_{1}=\frac{25}{30} \cdot 1=0.83 \frac{\mathrm{~m}}{\mathrm{~s}}
$$

## Answer.

C. $0.83 \mathrm{~m} / \mathrm{s}$
