## Answer on Question \#43997-Physics-Mechanics-Kinematics-Dynamics

A young girl gives her toboggan a push of $4.0 \mathrm{~m} / \mathrm{s}$ up a hill. It slides up the hill slowing down at an acceleration of $8.0 \mathrm{~m} / \mathrm{s}^{\wedge} 2$ [down]. It comes to a stop and then slides back towards her speeding up at the same rate as it slowed down on the way up. If the girl has to run 48 m down the hill from where it first was pushed to get to where her sled stopped, find the elapsed time for the journey.

## Solution

If we say that "down" the hill is the positive direction, then here is the information we have:

$$
\begin{aligned}
v & =-4.0 \frac{\mathrm{~m}}{\mathrm{~s}} \\
a & =8.0 \frac{\mathrm{~m}}{\mathrm{~s}^{2}} \\
d & =48 \mathrm{~m}
\end{aligned}
$$

Unknown variable is $t$ ("elapsed time for the journey").
So now we need an equation relating $a, t, d$, and $v$ :

$$
\begin{gathered}
d=\frac{a t^{2}}{2}+v t \\
48 \mathrm{~m}=8.0 \frac{\mathrm{~m}}{\mathrm{~s}^{2}} \frac{t^{2}}{2}+\left(-4.0 \frac{\mathrm{~m}}{\mathrm{~s}}\right) t \\
48 \mathrm{~m}=t^{2} \cdot 4.0 \frac{\mathrm{~m}}{\mathrm{~s}}-t \cdot 4.0 \mathrm{~m}
\end{gathered}
$$

Simplify, and rearrange this to be a standard quadratic equation:

$$
\begin{gathered}
t^{2}-t-12=0 \\
(t-4)(t+3)=0 \\
t=4 \text { or } t=-3
\end{gathered}
$$

We will pick $t=4$ seconds, since we are looking for a positive time.
Again, let's make sure this makes sense. She pushed the toboggan up the hill and it slowed to a stop in $\frac{1}{2}$ second $\left(\frac{4.0 \frac{\mathrm{~m}}{\mathrm{~s}}}{8.0 \frac{\mathrm{~m}}{s^{2}}}\right)$, slid back down to where she was for another $\frac{1}{2}$ second, and kept going down the hill for three seconds. During those three seconds, it sped up from $4.0 \frac{\mathrm{~m}}{\mathrm{~s}}$ to $4.0+3 \cdot 8.0=28.0 \frac{\mathrm{~m}}{\mathrm{~s}}$, so its average speed was $16 \frac{\mathrm{~m}}{\mathrm{~s}}\left(\frac{4+28}{2}\right)$, and it was therefore 48 m down the hill when it ran down the hill and stopped. Answer: 4 seconds.
