Answer on Question \#44910, Physics, Mechanics - Kinematics - Dynamics

THE MOTION OF A PARTICLE IS DESCRIBED BY AN EQUATION $\mathrm{X}=3 \mathrm{t}+6 \mathrm{t}-5 \mathrm{t}$ where x is meters and t is seconds find the postion acceleration of particle in 2 seconds.
Solution

$$
x=3 t+6 t-5 t=4 t
$$

The position in 2 seconds is

$$
x=4 t=4 \cdot 2=8 m
$$

The acceleration is

$$
a=\frac{d^{2} x}{d t^{2}}=0
$$

Acceleration in 2 seconds will be $0 \mathrm{~m} / \mathrm{s}^{2}$.
