

Answer on Question #46393-Physics-Other

Which of the following is NOT applicable when plotting the graph of experimental data?

- 1) Lines of bestfit should always be used
- 2) Circled dots or crosses may be used to show plotted points
- 3) Thin, sharp and continuous lines are acceptable
- 4) The scale must be chosen to make the graph occupy as small as possible of the graph page

Answer

The fourth statement:

- 4) The scale must be chosen to make the graph occupy as small as possible of the graph page is NOT applicable, because it is better the graph to occupy whole the graph page, that makes it more clear and easy to apprehend.
