## Answer on Question \#47859, Physics, Other

## Question:

a particle describes a horizontal circle on the smooth surface of an inverted cone. the plane of that circle is at a height of 9.8 cm above the vertex. then the speed of the particle is?

## Answer:

Newton's laws of motion:

$$
\begin{gathered}
N \cos \alpha=m \frac{v^{2}}{r} \\
N \sin \alpha=m g
\end{gathered}
$$

Where $r=h \tan \alpha$ is radius of motion.
From first 2 equations have:

$$
\begin{gathered}
\tan \alpha=\frac{m g}{m \frac{v^{2}}{r}}=\frac{g}{v^{2}} h \tan \alpha \\
v=\sqrt{g h}=\sqrt{9.8 \frac{\mathrm{~m}}{\mathrm{~s}^{2}} 9.8 \mathrm{~m}}=9.8 \frac{\mathrm{~m}}{\mathrm{~s}}
\end{gathered}
$$

Answer: $9.8 \frac{\mathrm{~m}}{\mathrm{~s}}$
