# Answer on Question \#48281, Physics, Mechanics | Kinematics | Dynamics 

## Question:

A ball is rolled horizontally off the edge of a 125 cm tall table. The ball lands 2.0 m away from the base of the table. How fast is the ball moving when it hits the floor. (This is not just the vertical final velocity).

## Answer:

Coordinates of the ball equals:

$$
\begin{gathered}
x=v_{x} t \\
y=h_{0}-\frac{g t^{2}}{2}
\end{gathered}
$$

The ball hits the floor if $\mathrm{y}=0$ :

$$
y=0 \Rightarrow t=\sqrt{\frac{2 h}{g}}
$$

Therefore components of velocity equal:

$$
\begin{aligned}
& v_{x}=\frac{x}{t} \\
& v_{y}=g t
\end{aligned}
$$

Total velocity:

$$
v=\sqrt{v_{x}^{2}+v_{y}^{2}}=\sqrt{\frac{x^{2} g}{2 h}+2 g h}=6.34 \frac{\mathrm{~m}}{\mathrm{~s}}
$$

Answer: $6.34 \frac{\mathrm{~m}}{\mathrm{~s}}$
