## Answer on Question 49945, Physics, Mechanics | Kinematics | Dynamics

## Question:

A bird flying at a height of 40 m with a speed of $10 \frac{\mathrm{~m}}{\mathrm{~s}}$ drops a small fruit from its mouth. It free fall is assumed, find the speed of the fruit just before it reaches the ground.

## Solution:

Let's find the y-component of velocity of the bird:

$$
\begin{gathered}
v_{y}^{2}=v_{0 y}^{2}+2 g h, \\
v_{y}=\sqrt{2 g h}=\sqrt{2 \cdot 9 \cdot 8 \frac{\mathrm{~m}}{\mathrm{~s}^{2}} \cdot 40 \mathrm{~m}}=28 \frac{\mathrm{~m}}{\mathrm{~s}} .
\end{gathered}
$$

Therefore, the speed of the fruit just before it reaches the ground will be:

$$
v=\sqrt{v_{x}^{2}+v_{y}^{2}}=\sqrt{\left(10 \frac{\mathrm{~m}}{\mathrm{~s}}\right)^{2}+\left(28 \frac{\mathrm{~m}}{\mathrm{~s}}\right)^{2}}=29.73 \frac{\mathrm{~m}}{\mathrm{~s}} .
$$

Answer:

$$
v=29.73 \frac{\mathrm{~m}}{\mathrm{~s}} .
$$
