## Answer on Question \#53504, Physics / Mechanics | Kinematics | Dynamics

Jed was driving his car at $40 \mathrm{~km} / \mathrm{h}$ on a subdivision where the speed limit is $20 \mathrm{~km} / \mathrm{h}$. He was spotted by an officer in a motorcycle, who accelerates in pursuit. By the time Jed sees the officer's motorcycle it as travelling at $60 \mathrm{~km} / \mathrm{h}$. What is the officer's motorcycle's velocity relative to Jed's car ?

## Solution:

The velocity of one body relative to another is called its relative velocity.

$$
V_{\text {relaltive }}=V_{\text {object }}-V_{\text {observer }}
$$

In our case

$$
\begin{gathered}
V_{\text {object }}=60 \mathrm{~km} / \mathrm{h} \\
V_{\text {observer }}=40 \mathrm{~km} / \mathrm{h}
\end{gathered}
$$

Thus,

$$
V_{\text {relaltive }}=60-40=20 \mathrm{~km} / \mathrm{h}
$$

Answer: $20 \mathrm{~km} / \mathrm{h}$
