

## Answer on Question #53620, Physics Other

I had a knee replacement I have an implant on top of my tibia which is over hanging on one side. If you put an equal amount of pressure on the implant would there be more pressure on the side that overhangs which would explain why I'm in pain?

### Answer

*Fig.1*

How much is clear from your description. You had been put the implant is the same as in Figure 1. The cause of the pain can be properly selected size of the implant. A more specific answer can be given only by a plastic surgeon. From a physical point of view, advice: you need to do an ultrasound.
