

Answer on Question #53675, Physics Other

I was wondering if we can just reflect laser with the help of many reflectors to focus it on one point. Then if we can store that energy that is emitted from the laser from that point from where we are concentrating it on. If we can store the energy then we can easily utilize it for various purpose. Is is possible to do that?????

Answer

It has been used for long time. Such a system is called a resonator. For example the Fabry-Perot resonator.
